

Core Concepts: Chunks & Embeddings

We store chunked stories & tests as embeddings for semantic retrieval

Why Chunking is Critical - A Story

Ingestion Pipeline

⚠ The Challenge

📊 Your QA Reality Check

📄 Excel Nightmare

- 5,247 test cases in one spreadsheet
- File size: 47MB (crashes frequently)
- 847 rows per module
- Search takes 30+ seconds

📄 PDF Documentation

- 200+ page requirements doc
- User stories mixed with policies
- No cross-references
- Ctrl+F is your only friend

Real Scenario: Healthcare QA Emergency

When your test search fails at the worst possible time

🕒 3 PM on Friday

The Situation

Critical security patch needs testing by Monday. New requirement: "Multi-factor authentication for patient portal with biometric fallback"

Your Mission

Find existing MFA tests, biometric tests, and patient portal tests to adapt. You have 2 hours before weekend.

Real Scenario: Healthcare QA Emergency

When your test search fails at the worst possible time

Traditional Search Disaster

Search: "MFA"

23 minutes

Found in row 2,847 of TestCases_Auth_v47_Final_FINAL.xlsx

Search: "biometric"

31 minutes

Scattered across 4 different docs, no clear pattern

Search: "patient portal"

45 minutes

Mixed with admin portal, provider portal, and vendor portal tests

< Previous

Next >

Search: "patient portal"

45 minutes

Mixed with admin portal, provider portal, and vendor portal tests

Result: 1 hour 39 minutes spent searching. Weekend ruined. Security patch delayed.

Enter Chunking: The Solution

Breaking down the monolith into smart, searchable pieces

Smart Document Surgery

Chunking intelligently breaks your massive documents into logical, contextual pieces that maintain meaning while being easily searchable.

Before Chunking

Massive_TestCases.xlsx (47MB)
- 5,247 test cases
- Mixed modules
- No structure
- Search nightmare

After Chunking

5,247 smart chunks
- Each test = 1 chunk
- Rich metadata
- Semantic search
- Context preserved

< Previous

Chunking in Action: The Rescue

How chunking saves your Friday afternoon

⚡ 3 PM Friday (Redux)

Same requirement: "Multi-factor authentication for patient portal with biometric fallback"

Semantic search: "multi-factor authentication patient"

3 seconds

✓ Found 12 relevant chunks: TC_AUTH_MFA_001 through TC_AUTH_MFA_012

Filter by metadata: module="PatientPortal"

1 second

✓ Narrowed to 7 patient-specific MFA tests

Semantic search: "biometric fingerprint fallback"

2 seconds

✓ Found 8 biometric test chunks with error handling patterns

Next >

Data sources for ingestion

Processing Steps

Vector database

Store and retrieve the data with meaning(Embedding)

Specialized database for storing and searching test case meanings

Eg : PineCone, MongoDB, Quadrant,MS SQL, PG vector

Vector Database Definition

What it stores:

A vector database stores mathematical representations of unstructured data — like test cases, user stories, and requirements as **vector embeddings**.

QA Example:

Test Case: "User login with valid credentials"

→ Vector: [0.4, 0.8, -0.1, 0.6, 1.1, ...]

Why it matters for QA:

- Find similar test cases by meaning, not just keywords
- Discover related requirements automatically
- Identify test coverage gaps
- Enable intelligent test recommendations

Test cases ingestion

The screenshot shows a VS Code editor with a file explorer on the left and a terminal at the bottom. The file explorer shows a project structure for 'rag-mongo-demo-backend'. The terminal shows the command 'npm install' and its output, which includes a warning about issues with dependencies and a message indicating that 6354 rows from 'testcases' were converted into 'src/data/testcases.json'.

```
.env
1 MONGODB_URI="mongodb+srv://muktigang31_db_user:0Kt3Xs0VpLKIHFXS@clustertestleafprog.qqwilnp.mongodb.net/?a
2 DB_NAME="RAG_testcases"
3
4 COLLECTION_NAME="testcases"
5 VECTOR_INDEX_NAME="vector_index"
6 BM25_INDEX_NAME="BM25_index"
7
8 USER_STORIES_COLLECTION_NAME="userstories"
9 USER_STORIES_VECTOR_INDEX_NAME="vector_index_userstory"
10
11
12
13 # Mistral AI Configuration (for embeddings)
14 MISTRAL_API_KEY=d9vZDRZydt1AhckdkFk66HdGw9z2nHLY
15 MISTRAL_EMBEDDING_MODEL="mistral-embed"
16
17 GROQ_API_KEY=
18
```

Terminal Output:

```
PS D:\TestLeafProgramAugust\phase2\RAG module_12thSept\13th Sept_StructuredDataIngestion\Wongob inge
stion\rag-mongo-demo-backend> npm install

To address all issues possible (including breaking changes), run:
npm audit fix --force

Some issues need review, and may require choosing
a different dependency.

Run 'npm audit' for details.
PS D:\TestLeafProgramAugust\phase2\RAG module_12thSept\13th Sept_StructuredDataIngestion\Wongob inge
stion\rag-mongo-demo-backend> node src/scripts/data-conversion/excel-to-json.js
[info] Converted 6354 rows from "testcases" into src/data/testcases.json
PS D:\TestLeafProgramAugust\phase2\RAG module_12thSept\13th Sept_StructuredDataIngestion\Wongob inge
stion\rag-mongo-demo-backend>
```

The screenshot shows the MongoDB Atlas Search & Vector Search interface. The left sidebar contains navigation links for 'Search & Vector Search', 'AUTO EMBEDDING', 'NATIVE RERANKING', and 'SHORTCUTS'. The main content area displays a table of search indexes. The table has columns for Database, Collection, Index Name, Status, Queryable, Type, Index Fields, Documents (Estimated), Total Size, and Rec Mem. The table shows one index named 'vector_index' in the 'testcases' collection, which is 'READY' and 'Queryable'. The index fields are 'embedding', 'id', 'module', 'title', and 'description'. The documents are estimated at 0 (0% indexed of 0), and the total size is 317B.

Database	Collection	Index Name	Status	Queryable	Type	Index Fields	Documents (Estimated)	Total Size	Rec Mem
RAO_testcases	testcases	vector_index	READY	✓	vectorSearch	"embedding", "id", "module", "title", "description"	0 (0%) indexed of 0	317B	317E

Through postman

1. Npm run dev

The screenshot shows the Postman interface with a collection named 'RAG MongoDB - Data Ingestion'. The selected item is '1. Health Check', which is a GET request to '[[baseUrl]] /api/health'. The request headers are configured with the following values:

Key	Value	Description
Cache-Control	no-cache	
Postman-Token	<calculated when request is sent>	
Host	<calculated when request is sent>	
User-Agent	PostmanRuntime/2.6.0	
Accept	*/*	
Accept-Encoding	gzip, deflate, br	
Connection	keep-alive	

The response is a 200 OK status with a response time of 177 ms and a body of 314 B. The JSON response is:

```
{  "status": "OK",  "message": "Server is running"}
```

The screenshot shows the Postman interface with a collection named 'RAG MongoDB - Data Ingestion'. The selected item is '2. Upload Excel - Test Cases', which is a POST request to '[[baseUrl]] /api/upload-excel'. The request body contains a JavaScript script:

```
// Save the output file name for next requests
if (pm.response.code === 200) {
  var jsonData = pm.response.json();
  if (jsonData.outputFile) {
    pm.collectionVariables.set('outputFile', jsonData.outputFile);
    console.log('Output file saved: ' + jsonData.outputFile);
  }
}
```

The response is a 200 OK status with a response time of 1.27 s and a body of 680 B. The JSON response is:

```
{  "success": true,  "message": "Test cases file converted successfully",  "outputFile": "converted-1790162293587.json",  "output": "\u26a0 Sheet 'Testcases' not found. Using first sheet: 'testcases'\n\u2705 Converted 6354 rows from 'testcases' into 0: /TestLeafProgramAugust/phase2/RAG module_12thSept/13th Sept_StructuredDataIngestion/MongoDB Ingestion/rag-mongo-demo-backend/src/data/converted-1790162293587.json"}

VIEW COMPOUND QUERY EXAMPLE

CREATE SEARCH INDEX

MO free clusters have a limit of 3 search and vector indexes per cluster. Indexes Used: 1 of 3.

Database	Collection	Index Name	Status	Queryable	Type	Index Fields	Documents (Estimated)	Total Size	Rec Mem
RAO_testcases	testcases	vector_index	READY	✓	vectorSearch	"embedding", "id", "module", "title", "description"	6,354 (100%) indexed of 6,354	10.61MB	10.6
