Phase-wise implementation process

Phase3 is approved . Proceed with phase4

Phase 3 is approved. Phase 4 is PDF upload only. I'll inspect the current router/controller, upload-size configuration, and the guide's validation/error examples, then add safe temporary disk upload with a server-generated filename and Postman-testable success/failure responses. I won't add PDF text extraction yet.

Searched for files and reviewed 5 files

The guide calls for Multer and `pdf-parse` plus Multer's TypeScript types in this phase; `pdf-parse` will be installed but not used until Phase 5. The upload will validate both `pdf` extension and `application/pdf`, enforce the configured 5 MB limit, use a UUID filename under `uploads/`, return only client-safe metadata, and remove the temporary file after this test endpoint finishes.

Ran `npm install multer pdf-parse`; if `(SLASTEXTCODE > n...`

Phase 11 is approved. Proceed with phase 12

Phase 12 completed , proceed with phase 13

The screenshot shows the VS Code editor with the file `01_Resume_Ingestion_Phasewise_Implementation 1.md` open. The code defines the **PHASE 13 -- Full Resume Ingestion Service**. It includes a file path `src/modules/ingestion/services/ResumeIngestionService.ts` and a main method `ingestResume(file: Express.Multer.File)`. The full flow is detailed as follows:

- PDF upload
- Validate PDF
- Extract Text
- Clean Text

The terminal output shows the command `PS D:\TestLeafProgram\August\phase2\rag module_12thSept\27th Sept\HR_Resume` and the successful execution of `tests/regex.test.js`, with a **PASS** status. The chat window on the right provides instructions for the Postman test, including the URL `http://localhost:3000/v1/resume/ingest` and the expected success response:

```
{
  "success": true,
  "message": "Resume ingestion completed",
  "resumeId": "...",
  "data": {
    "name": "...",
    "role": "...",
    "company": "...",
    "totalExperience": 13,
    "skillsCount": 9,
  }
}
```

The screenshot shows the Postman interface with the API endpoint `http://localhost:3000/v1/resume/ingest` selected. The request is a **POST** method with a **form-data** body. The body contains a file named `Arishraj Resume.pdf`. The response is a **200 OK** status with a JSON body:

```
{
  "success": true,
  "message": "Resume ingestion completed",
  "resumeId": "6ab0d3b63dc53259ed87e8b1",
  "data": {
    "skillsCount": 1,
    "embeddingModel": "mistral-embed",
    "embeddingDimension": 1024
  },
  "timings": {
    "extractMs": 194,
    "cleanMs": 8,
    "parseMs": 26,
  }
}
```

The right sidebar shows the **Proceed with Phase 12** message, indicating that Phase 11 is approved and Phase 12 should be proceeded with.

Phase 13 is approved and proceed with phase14

The screenshot shows a VS Code editor with a file named `01_Ressume_Ingestion_Phasewise_Implement... 1.md`. The code is divided into two main sections: **PHASE 13 -- Full Resume Ingestion Service** and **PHASE 14 -- Error Handling**.

PHASE 13 -- Full Resume Ingestion Service

- ## Verification**
- ## Goal**
- Use stable errors across all ingestion endpoints.
- Table of error cases:

Case	HTTP	Error Code	Message
Missing file	400	"FILE_REQUIRED"	Resume PDF is required
Invalid file	415	"INVALID_FILE_TYPE"	Only PDF files are allowed
Over size file	413	"FILE_TOO_LARGE"	Resume exceeds maximum upload size
Empty resume	422	"RESUME_EXTRACTION_FAILED"	Resume extraction failed
Parse failure	422	"RESUME_PARSE_FAILED"	Resume parsing failed
Embedding failure	502	"EMBEDDING_FAILED"	Mistral embedding failed
MongoDB failure	500/503	"INGESTION_FAILED"	Resume ingestion failed

- ## Standard error response**
- JSON response structure:

```
{  "success": false,  "requestId": "<generated request ID>",  "errorCode": "RESUME_PARSE_FAILED",  "message": "Resume parsing failed"}
```

PHASE 14 -- Error Handling

- ## Verification**
- ## Goal**
- Use stable errors across all ingestion endpoints.
- Table of error cases (repeated from Phase 13).
- ## Standard error response**
- JSON response structure (repeated from Phase 13).

The right sidebar shows a chat window with the message: "Phase 13 is approved and proceed with phase14". Below it, a Postman check is shown for the endpoint `POST http://localhost:3000/v1/resume/parse` with a body of `raw` JSON. The expected HTTP 422 response is shown as a JSON object.

The screenshot shows a Postman interface with a collection named `HR_Ressume_Portal`. The selected request is a **POST** to `http://localhost:3000/v1/resume/parse`. The body is `raw` JSON.

The response is a **200 OK** status with a response time of 104 ms and a size of 480 B. The response body is a JSON object:

```
{  "success": true,  "resume": {    "skills": [      "Python"    ],    "email": "rajarish940@gmail.com",    "education": "Jun 2021 - May 2024\tBachelor of Business Administration (BBA)"  }}
```

The right sidebar shows a chat window with the message: "Phase11 is approved. proceed with phase 12". Below it, a Postman check is shown for the endpoint `POST http://localhost:3000/v1/resume/parse` with a body of `raw` JSON. The expected HTTP 200 response is shown as a JSON object.

## Ingestion process of 199 documents provided

The screenshot displays the MongoDB Atlas Data Explorer interface. The top navigation bar shows the organization 'Mukht's Org' and project 'Project 0'. The left sidebar contains a 'Data Explorer' section with a tree view showing the database structure: 'RAGAgentsCreated' > 'HR\_ResumePortal' > 'Resumes'. The main panel shows the 'Resumes' collection with 146 documents. A query bar at the top of the main panel contains the query: `{ field: 'value' }`. Below the query bar, there are buttons for 'ADD DATA', 'BULK', and 'EXPORT CODE'. The main content area displays a single document from the 'Resumes' collection, which is a JSON object containing fields like '\_id', 'contentHash', 'createdAt', 'education', 'email', 'embedding', 'embeddingDimension', 'embeddingModel', 'fileName', 'rawText', 'skills', and 'updatedAt'. The document is a resume for 'Arishraj Resume.pdf'.
